CONCRETE RECLAIMER

DTR – CONCRETE RECLAIMER

The concrete reclaimer is a machine used in precast concrete plants and for the recovery of the aggregates. The particles of inert materials with a size greater than 0.3 mm are separated from the washing water by the screw of extra-heavy construction. Heavy carbon steel galvanized.

Available in:

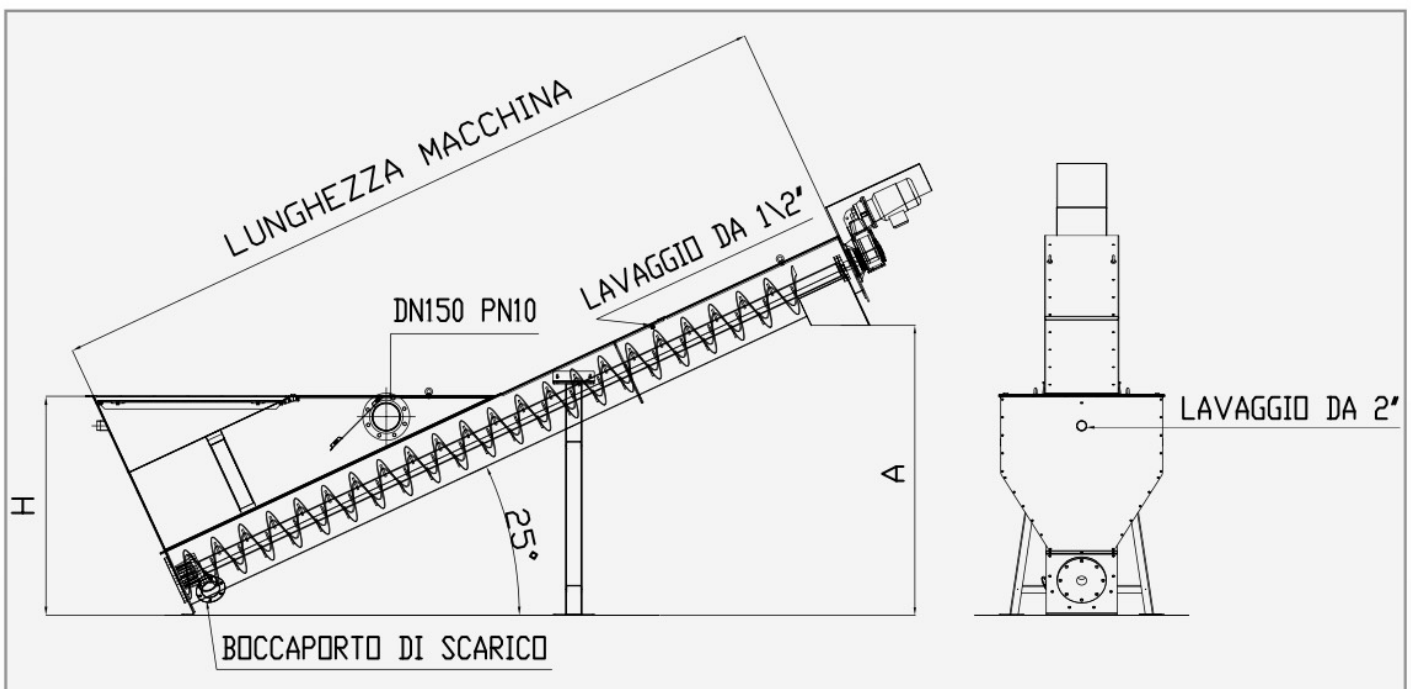

- version with large hopper for unloading of two mixers simultaneously
- version with small hopper to the discharge of a single mixer
- mini-course for small separator

The separator is so defined by the ability to wash and separate the aggregates (gravel used to build the cluster) of cement and silt. This makes the material from washing concrete mixers fully reusable. In addition the DTR is a machine very reliable and easy to maintain.

Technical details

	DTR700	DTR300
LUNGHEZZA MACCHINA	6000 mm	4500 mm
INCLINAZIONE	25°	25°
POTENZA MOTORE	5,5 kW	1,5 kW
H	1950 mm	1325 mm
A	2300 mm	1750 mm
